

THINKWARE launches Q1000 at the CV Show for safer driving this summer

THINKWARE DASH CAM™

THINKWARE DASH CAM Q1000

THINKWARE CONNECTED

The Q1000 dash cam boasts an ultra-clear 2K 1440P QHD 30 FPS or FHD 60 FPS recording to capture more detailed dash cam footage even while parked

London, May 2022 – Today the world-leading dash cam manufacturer, THINKWARE announces the launch of its latest Q1000 dash cam to the UK market.

2CH QHD-QHD, The Q1000 dash cam boasts an ultra-clear 2K 1440P QHD 30fps or FHD 60fps recording to capture more detailed dash cam footage in all road conditions including number plate detail capture.

Key features include:

- Built-in WiFi and Bluetooth connectivity lets you upload saved footage to your mobile phone using the Thinkware Link app, so you can easily view, edit and share videos.
- UK safety camera alerts using a database provided by our partner Cyclops with free lifetime updates
- Geo-fencing – get alerted when your vehicle travels out of a set area with the optional Connected Service

- Road safety warning system – alerts the driver to forward collisions, forward vehicle departures and lane departures
- Remote live view – access the dash cam remotely through the optional Connected service to view a live video feed
- Parking Surveillance Mode with hardwiring installation enables parking protection against potential mishaps and hit-and-run incidents
 - Motion Detection: Monitor and capture any motion around the vehicle for potential vandalism attempts.
 - Impact Detection: Monitor any impact to the vehicle while it is parked to catch any hit-and-run driver in the act while you are away.
 - Time Lapse photography: By reducing the recording frame rate from 30fps to 2fps, Time Lapse Parking Surveillance mode enables the dash cam to record continuously while parked, and make the most of the SD card capacity.
 - Energy Saving Mode 2.0: By only providing minimal power to essential components while in Parking Surveillance mode, THINKWARE's proprietary Energy Saving 2.0 technology sets the bar high among its competitors by enabling the Q1000 to remain on standby for up to 576 hours*, or 24 days, while the vehicle's ignition is off (Based on THINKWARE's BAB-50 4,500mAH External Battery).
 - Radar accessory (Optional Radar required): Pair the Radar Module with the Q1000 to extend its parking surveillance duration while reducing power consumption when set to Energy Saving Mode 2.0*. The Radar will detect motion and allow the dash cam to prepare to save an event clip. If an impact is detected, a 20 second video (10 seconds before and 10 seconds after the impact) is stored to a dedicated folder

The Q1000 is available on Amazon, and independent specialists (re-sellers)- RRP 1CH £ 259 (With 32GB SD card), 2CH £ 349 (With 32GB SD card)
